Bitdefender®

GravityZone Enterprise Security

GravityZone is built from the ground up for virtualization and cloud to deliver business security services to physical endpoints, mobile devices, virtual machines in private, public cloud and Exchange mail servers.

GravityZone Enterprise Security provides flexible licensing options to fit the protection needs of your offices, datacenters and public cloud. All security services are delivered from **one virtual appliance** to install on premise covering all endpoints across your environment.

GravityZone Architecture

"...traditional security solutions just would not work. We knew we needed to find a security solution built for virtualized environments."

*Mark Breaux, Information Technology Officer,
Citizens Savings and Loan*

"Exceptional combination of efficiency and safety for corporate users"

*Andreas Marx, CEO
AV-TEST*

UNFOLLOW THE TRADITIONAL

Unlike traditional solutions that patch together pre-virtualization and pre-cloud Windows applications, Bitdefender GravityZone **combines all the security services an organization needs into a single delivery platform** to reduce your cost of building a trusted environment for all endpoints.

KEY BENEFITS

Most effective and least TCO security solution in mixed architectural environments: physical, virtual, mobile and cloud. Single point of control and policy definition with no single point of failure, enabling organizations to reduce the total cost of securing their environment through one optimized application with efficient management, **easy deployment and enforcement** of security policies to **any type and number** of endpoints in **any location**.

Best protection and performance.

Bitdefender has consistently been ranked the #1 security software by independent reviewers such as AV Test and AV Comparatives and it does not compromise protection for performance.

Save more money and time.

Built on self-configuring, resilient and secure open source solutions, GravityZone provides intelligent deployment, an intuitive web interface and it grows organically to reduce the administrative burden.

KEY FEATURES

- One application delivering security services to physical endpoints, mobile devices, Exchange mail servers and virtual machines in private and public cloud;
- One console offering easy centralized management, easy deployment and enforcement of security policies to any type and number of endpoints in any location;
- One architecture enabling full visibility and control in the datacenter and company-wide through integration with Active Directory, VMware and Citrix hypervisors;
- One agent covering any combination of virtualization platforms, cloud providers, operation systems and physical devices;
- Multiple layers of security for endpoints: antivirus and antimalware with behavioral monitoring, zero-day threat protection, application control and sandboxing, firewall, device control and content control with anti-phishing and anti-spam for Exchange mail servers.
- Apply policies based on location or user and allow different levels of freedom, save time when creating new policies by using ones that are already created.

- Test the new installation kits and updates delivered by Bitdefender before deploying them in production in your own testing environment with endpoint staging.

Universal coverage:

- Any endpoint: physical, virtual and cloud;
- Any form factor: workstation, server, embedded, mobile;
- Any OS: Windows, Linux, Mac;
- Any virtualization platform: VMware, Citrix, Microsoft Hyper-V, KVM, Oracle;
- Organizations of any size: scales from tens to millions of endpoints just by cloning virtual appliances;
- Any environment: datacenters, local area networks, wide area networks, private cloud, public cloud and hybrid cloud;
- Smart centralized scanning employs centralized security servers where most antimalware processes take place through offloading from each protected physical or virtual machine.

SECURITY SERVICES DELIVERED BY GRAVITYZONE ENTERPRISE SECURITY ON-PREMISE INSTALLATION
